Introduction:

The Rental Room Management system is the central part of the student Room Related system which consists Room structure guidance, cost, Rent, or some room related instructions and rules.The Rental Management System saves time also. The Rental Management System is used to quickly identify a suitable place to save time and cost. This Management System is the best way to search the House, Apartment office, and Paying Guest. Hence this System is best applicable for the above reasons making House rental an easy process through an online system.Project objective will be focused on developing Rental Room Management system to ensure effectiveness of the flow of registration, moreover the system will offer a complete management system that integrated with the Rental System to help Brokers for maintaining the flow process of the Room Management.Registration process will be done online without the need of paperwork anymore. It also helps the student to get more information about the Rental Room Management system while they enrolled.We are also making a website for Student Admission System. This website will provide a registration facility as well as information of Rental Room Management system.
