## ABSTRACT

Our project focuses on developing a website to sell online Book Store management system . The platform aims to provide customers with a user-friendly interface, enabling them to conveniently purchase book and other novel etc. from the comfort of their homes, also customers can check various book related services. Additionally, the system will incorporate an admin module to efficiently manage customers, customer's orders, payments, recent messages and track deliveries. By addressing the limitations of existing systems and emphasizing specialization, our proposed E-commerce platform seeks to streamline the online shopping experience for book store systems and book and novel and other while ensuring effective inventory management and prompt order delivery.
