महाराष्ट्र महाविद्यालय, निलंगा

प्रमाणपत्र

प्रमाणपत्र देण्यात येते की, कुमार / कुमारी Nelwade Shubham Tanaji. इयत्ता B.A. TY. हजेरी क्रमांक 29 शैक्षणिक वर्ष २०-२०२४. मधील प्रकल्प कार्य Green House effect. या विषयावर मार्गदर्शक शिक्षक / प्राध्यापकाच्या मार्गदर्शनाखाली अपेक्षित सर्व कामकाज, माहिती संकलन व अहवाल लेखन विद्यापीठाच्या कला लेखन नियमाप्रमाणे प्रकल्प कार्य तयार केलेले आहे. सदर प्रकल्प कार्य हे संबंधित विद्यार्थ्याने स्वतः संकलित केलेले आहे.

सदर प्रकल्प कार्य हे संबंधित विर्थ्यांने स्वतः संकलित केलेल्या लेखन सामग्रीवर आधारित असून स्वतःच्या हस्ताक्षरात लिहिले आहे.

दिनांक : 15-10-2023

* Green House effect & ozone depletion

Green House effect :—

The green House effect discovered by Jaseph fourier in 1824.

① The Green House effect is a natural process that warms the Earth's surface. When the sun energy reaches the earth's atmosphere, some of it is reflected back to space and the rest is absorbed and re-radiated by green house effect. green house gases.

① The green house effect is the process by which radiation from a plant's atmosphere warms the plant's surface to a temperature above what it would be without it's atmosphere

* How Green House effect is usefull :—

① Without green house effect we can not survive in planet earth because, The absorbed energy warms the atmosphere and the surface of earth. This process maintains the earth's temperature at around 33°C celsium warmer than it would otherwise be.

* Without green house gases, the average temperature of earth's surface would be about 18°C (0°F) rather than the present average of 15°C green house gases.

* Green House effect :—

Step-I :— Solar radiation reaches the earth's atmosphere, some of this is reflected back into space

Step - II

The rest of sun's energy is absorbed by the land and oceans, heating the earth.

Step III :—

Heat radiates from earth towards space.

Step IV :—

Some of this heat is trapped by green house gases in the atmosphere, keeping the earth warm enough to sustain life.

Step V :—

Humans activities such as burning fossil fules, orgiaultue and land cleaning are increasing the amount of green house gases.

* Causes of Green House Effect :-

1) The problem we now for is that human activities - particulary burning fossil fules (coal, oil and natural gas), agriculture and land clearing - are increasing the concentration of green house gases.

2) This is enhansed green house effect, which is contributing to warming of the earth, enhanced green house effect lead to GLOBAL WARMING.

* Consequences of Green House Effect :-

1) The effect due to green House effect include :-

- More draught & more flooding.
- less ice & show.
- more extreme weather incidents.
- Rising sea level
