## Index

① Importance of Recycling  
in conservation of Environment.

② Recycle

③ Saves Energy

④ Saves Money.

## Importance of Recycling in Conservation of Environment.

- It reduces the amount of waste produced by us.
- Conserves natural resources such as water, wood and minerals.
- It prevents the overuse of resources and helps in preserving them.
- In addition, it saves energy.

### \* Why should we Recycle :-

- Recycling is important in today's world if we want to leave this planet for our future generations.
- It is good for the environment since we are making new products from the old products which are of no use to us.

- Recycling begins at home

- If you are not throwing away any of your old products and instead utilizing it for something new, then you are actually recycling.

- When you think of recycling you should really think about the whole idea: reduce, reuse and recycle.

- We have been careless up to this point with the way we have treated the earth, and its time to change not just the way we do things but the way we think.

- United States Environmental Protection Agency (EPA) defines recycling as.

" Recycling is the process of collecting and processing materials that would otherwise be thrown away as trash & turning them into new products.

→ We should Recycle Because Recycling

- Helps in keeping The environment Clean .
- Reduces The amount of waste products .
- Helps in the conservation of many non-renewable resources .
- Saves energy and thus helps in avoiding energy Crisis .
- Prevents landfills and incinerators from getting extremely overloaded .
- Saves and protects the economy of a household .
- Helps in creating new job opportunities .
- Restrains The hunt for raw materials .

- Recycling is good for the environment. In a sense, we are using old and waste products that are of no use & then converting them back to the same new products.

\* 1) Protects Ecosystems and wildlife.

- When we recycle, we lessen disruption to the natural world.

- When we cut down fur trees and forests, we are preventing harm to animals.

- By reducing disruption and damage to the natural world, we help preserve ecosystems and wild life.

## \* Saves Energy: -

- Making products from recycled materials requires less energy than making them from new, raw materials.
- It takes much less energy to make products out of recycled materials than from raw materials.
- For example, recycling one glass bottle saves enough power to light a 100-watt light bulb for four hours.
